(25,'Lokesh', 'Finance', 58000, 5, 'B');

CASE AND WHEN CHAINING PROBLEMS

Problem 1: Salary Hike Based on Experience and Performance

Scenario: You want to give a salary hike based on both experience and performance rating. If the employee has:

· Experience ≥ 8 and Performance 'A', they get a 20% hike.

· Experience ≥ 5 and Performance 'B', they get a 15% hike.

· Performance 'C' gets no hike.

· For other cases, they get a 10% hike.

2) Problem 2: Bonus Calculation Based on Department and Performance

Scenario: Bonus is calculated based on the department and performance rating:

· For Finance department:

o If performance is 'A', the bonus is 20% of the salary.

o If performance is 'B', the bonus is 15% of the salary.

o If performance is 'C', the bonus is 5% of the salary.

· For Engineering department:

o If performance is 'A', the bonus is 18% of the salary.

o If performance is 'B', the bonus is 12% of the salary.

o If performance is 'C', the bonus is 3% of the salary.

· For other departments, a flat 10% bonus.

Problem 3: Categorizing Employees by Salary Range and Performance

Scenario: You want to categorize employees based on salary ranges and their performance:

· If salary is greater than 80,000 and performance is 'A', label them as High Performer.

· If salary is between 50,000 and 80,000 and performance is 'B', label them as Mid Performer.

· If salary is less than 50,000 or performance is 'C', label them as Low Performer.

Problem 4: Risk Assessment Based on Experience and Department

Scenario: You want to assess employee risk based on their experience and department:

· For employees in the HR department:

o If experience is less than 5 years, they are High Risk.

o If experience is more than 5 years, they are Low Risk.

· For employees in Engineering or Finance departments:

o If experience is more than 8 years, they are Low Risk.

o If experience is less than 8 years, they are Medium Risk.

· Employees in other departments are automatically labeled Medium Risk.

Nested case and when

Problem 1: Nested CASE for Performance and Salary Hike Based on Multiple Criteria

Scenario: You want to determine the salary hike based on performance rating, experience, and current salary. The hike rules are:

· If performance is 'A':

o For salaries above 80,000, experience above 5 years gets a 25% hike, otherwise 20%.

o For salaries between 50,000 and 80,000, the hike is 15%.

· If performance is 'B':

o For experience above 5 years, the hike is 12%.

o Otherwise, it's 10%.

· For performance 'C', there is no hike.

2.Department and Performance

Scenario: You are tasked with giving bonuses based on the department, performance rating, and experience:

· For Finance department:

o If performance is 'A' and experience is more than 10 years, bonus is 25% of salary.

o Otherwise, bonus is 20%.

· For HR department:

o If performance is 'B' or experience is greater than 5 years, the bonus is 15%.

o Otherwise, the bonus is 10%.

· For other departments, the bonus is 8%.

Problem 3: Nested CASE for Employee Categorization Based on Salary, Performance, and ExperienceScenario: Categorize employees based on their salary, performance rating, and experience:

· If salary is above 70,000:

o If performance is 'A', and experience is more than 8 years, they are labeled 'Top Performer'.

o If experience is less than 8 years, label them as 'Mid Performer'.

· If salary is between 50,000 and 70,000, they are 'Average Performer' unless their performance is 'A', in which case they are 'Rising Star'.

· If salary is below 50,000, they are 'Low Performer'.

4.Nested CASE for Tax Bracket Based on Salary and Experience

Scenario: You want to determine the tax bracket of employees based on their salary and experience:

· If salary is above 90,000:

o If experience is more than 10 years, they fall into the 35% tax bracket.

o Otherwise, they fall into the 30% tax bracket.

· If salary is between 60,000 and 90,000:

o If experience is more than 5 years, they fall into the 25% tax bracket.

o Otherwise, they fall into the 20% tax bracket.

· For salaries below 60,000, the tax rate is 15%.

Problem 5: Nested CASE for Promotion Eligibility Based on Performance, Salary, and Experience

Scenario: You want to determine if employees are eligible for promotion based on their performance rating, salary, and experience:

· If performance is 'A':

§ If salary is more than 75,000 and experience is greater than 7 years, they are 'Eligible for Senior Role'.

§ Otherwise, they are 'Eligible for Junior Role'.

· If performance is 'B':

§ If experience is more than 5 years, they are 'Eligible for Consideration'.

§ Otherwise, they are 'Not Eligible'.

· If performance is 'C', they are automatically 'Not Eligible'.
